HP/UV = Hydrogen peroxide/ultraviolet light

GWETS = Ground water extraction and treatment system

gpm = Gallons per minute

μg/L = Micrograms per liter N/A = Not applicable

¹ HP/UV flow rate is the process water flow rate that goes through the HP/UV.

² Extraction wells EW-3 and EW-5 at the Midco I Site are used for dewatering purposes only.

³ Total treated water volume is obtained from the site treated water flow totalizer.

- ⁴ Design average flow rate is the model-predicted flow rates of 21.0 or 50.6 gpm, respectively for the Midco I and Midco II Sites. The design average flow rates changed on February 24, 2003 from 24.5 to 50.6 gpm for Midco II. The Midco I design average flow rate varies between 21 and 28 gpm, based on dewatering.
- S Average monthly operating flow rate is the total treated water volume divided by the operating time excluding all non-GWETS-related shutdowns. This value is different from the HP/UV flow rate because of the flow recycled during the tube cleaning.
- ⁶ Average monthly flow rate is the totalized volume of treated water divided by the number of minutes for that month.
